

Ecology and Energy Efficiencies

The below initiatives and protocols have been introduced over recent years and continue to be in place.

- Phasing in of energy saving light bulbs (LED – Light emitting diode).
- Replacement of air conditioned units (in certain apartments) with inverter systems (Ongoing policy).
- Installation of wireless sensors on doors and windows in air conditioned units to automatically cut off the electricity power of the A/C system when anyone of them kept opened.
- Reduction of the timing for the spa bath clock within Club Marbella.
- “Help us help our environment” tent cards placed in all apartments.
- Collection of used cooking oil for recycling from our restaurants (external company collects).
- Control of water consumption in cisterns.
- Implementation of automatic sprinkling water system in green (grassed) areas
- Implementation of automatic movement sensitive lighting in WCs located in common areas. (where H&S permits).
- Recycling of ink cartridges for both printers and faxes. (Leasing of photocopiers).
- Recycling of batteries. (Central collection point – Stores department “general”).
- Provision in the rubbish area of containers for plastic and glass (signage in place).
- Paper recycling programmes. (boxes in all offices, collection and centralised + then collected).
- Standard purchase policy to purchase electrical appliances rated class A+
- Key Card system introduced in some apartments to cut the power (Club Marbella).
- Implementation of special filter reduction flow taps in all apartments so as to reduce water consumption.
- Replace pumps for more efficient models (variable speed) in swimming pools.
- New electrical switchboard to control the pumps within the water reservoirs in order to save energy.
